Peserve **World Production** and Trade

United States Department of Agriculture

Foreign Agricultural Service

Washington, D.C. 20250

Weekly Roundup

WR 22-88

June 2, 1988

The Foreign Agricultural Service of the U.S. Department of Agriculture today reported the following developments in world agriculture and trade.

OILSEEDS AND PRODUCTS

01101101

EUROPEAN COMMUNITY'S Double Zero Rapeseed Varieties Expanding; Substituting for Imported Oilcrops. The expansion of double zero (00) rapeseed varieties in the European Community (EC) means that EC rapeseed will be more substitutable for soybean meal, according to the U.S. agricultural counselor to the EC. An estimated 45 percent of 1988 EC rapeseed area was planted to 00 rapeseed varieties, up from 25 percent in 1987; conversion to 00 varieties is expected to reach 100 percent next year, according to the EC Commission. The increase will come from France and the United Kingdom, as the other major producers, Germany and Denmark, already plant 00 exclusively. To achieve success in its 00 conversion program, the EC relaxed the definition of 00 varieties; the maximum glucosinolate level of 20 micro moles per gram by July 1988 was pushed back 2 years. Instead, 00 rapeseed with up to 35 micro moles of glucosinolate per gram will get the rapeseed support price, plus a premium.

High glucosinolate levels limit use of rapeseed meal in feeds, but lower glucosinolate levels will increase the use in cattle feeds to 30 percent from the current 15 percent. In pig feeds the level will increase from less than 5 percent to 10 percent, and in poultry feeds the level will increase from less than 5 percent to 5 to 10 percent. EC Commission officials say they do not expect any displacement of soybean meal.

DAIRY, LIVESTOCK AND POULTRY

UNITED KINGDOM Imposes Third Country Meat Directive on Imports for U.S. Military Use. The United Kingdom (UK) has begun imposing the EC Third Country Meat Directive and the U.K.'s imported food regulations on imports of red meat for use on U.S. military bases in the U.K. Since the imposition came without warning, at least one shipment of frozen meat for use at a U.S. military base was issued a "re-export or destroy" notice upon arrival. The status of as many as 50 other container loads currently on the water also was in doubt. However, it is believed that an agreement will be reached whereby consignments in the pipeline will be admitted provided there is no obvious transgression of animal health considerations.

SALLY KLUSARITZ, Editor, Tel. (202) 447-3448. Additional copies may be obtained from FAS Media and Public Affairs Branch, 5920-S, Washington, D.C. 20250-1000. Tel. (202) 447-7937.

COSTA RICA Offers Subsidized Credit for Beef Cattle. Costa Rica has begun subsidizing credit to ranchers who buy beef and dual-purpose cattle (cattle used for beef or milk). This move is in response to the continued decline of Costa Rica's ability to produce enough beef to maintain normal exports to the United States and adequately supply its domestic market. This will likely provide U.S. cattle exporters with an opportunity to increase sales to Costa Rica.

The government will subsidize loans available through national banks to provide credit at the rate of 9 percent per year for small-scale producers, 12 percent for medium-scale producers and 18 percent for large-scale producers. Normal interest rates are about 25 percent. These loans will be made available for a period of two years, from May 1988 through May 1990.

A total of 800 million colones (U.S.\$10.8 million) will be lent under this program. According to local newspapers, this will represent a cost of \$3.2 million to the Costa Rican government. Applicants must first have loans approved by the banks and then have applications screened by the executive commission for beef cattle. Applications will be screened on the basis of technical and financial merit and participating producers must enter into a program aimed at optimizing productivity.

TOBACCO

WORLD Tobacco Production for 1988 Projected Up. World tobacco production for 1988 is forecast at 6.5 million tons, 5 percent above last year's harvest. The increase is due, for the most part, to a projected 19-percent increase in China's production to a near record 2.3 million tons. The increase in China is based on larger-than-expected plantings because producers' returns in 1987 were up 30 percent for flue-cured tobacco which represents about 80 percent of Chinese production. In the United States, production is projected up 11 percent because of higher production quotas for burley and flue-cured tobacco. In India, production is projected down 30 percent due to drought followed by unseasonal rain storms in some areas at transplanting time. Among other major producers, Mexico, Bulgaria and Indonesia are projected to have larger production in 1988 than in 1987 when their crops were adversely affected by the weather. In Canada, production is projected up 20 percent because of higher prices. In Zimbabwe, production is lower than the above-normal level reached in 1987, but the 1988 crop quality is up sharply. In Thailand, production is projected to fall 20 percent because of reduced plantings due to low returns the past two years and hail damage to the early season crop. No major changes are forecast for the other major producers.

World flue-cured tobacco production for 1988 is projected at 3.6 million tons, up 10 percent. Higher projected production in China, up 21 percent, and in the United States, up 8 percent, offsets the projected 44-percent drop in India and the 15-percent drop in Zimbabwe.

World burley tobacco production for 1988 is projected at 678,000 tons, up 14 percent due to the projected 21-percent increase in U.S. production. World oriental tobacco production is projected up about 1 percent to 859,000 tons, but is down substantially from 1986. Turkey, the second largest producer, is projected to harvest an 8-percent smaller crop after a 12-percent increase in 1987 caused by favorable weather and an area expansion infuenced by higher support and market prices. In Bulgaria, production fell 20 percent in 1987 because of severe drought. For 1988, production should be up about 20 percent with a return to average yields.

Dark air/sun-cured tobacco production for 1988 is projected down 9 percent to 1.0 million tons because of a 22-percent drop in Indian production.

World unmanufactured tobacco production, by leaf type, is forecast as follows in 1,000 tons:

Leaf type	Revised 1986	Revised 1987	Forecast 1988
Flue-cured	2,996	3,265	3,580
Burley	607	595	678
Oriental	881	84	859
Dark air/sun-cured	1,112	1,108	1,009
Light air-cured	130	108	114
Dark air-cured, cigar	214	198	197
Dark fire-cured	66	59	50
Total 1/	6,005	6, 182	6,487
	-		-

1/ Individual types may not add to total due to rounding.

HONEY

CANADA To Subsidize Honey Production. The Canadian government recently announced it will subsidize honey production under the special Canadian grains program to help offset low market returns. The subsidy formula for honey producers was announced at 6 cents per pound times the average provincial yield minus the yield from a producer's first 25 hives. The 25-hive minimum is expected to exclude a large number of smaller producers. Most of the larger producers are in western Canada where yields are double the eastern average. The total financial obligation due to honey producers is likely to fall between C\$2.5 to C\$3.0 million.

WEEKLY EXCHANGE RATE DEVELOPMENTS

The U.S. dollar rose slightly this week against all major currencies except the Canadian dollar and the Japanese yen. News that the U.S. gross national product grew by an annualized rate of 3.9 percent for the first quarter of 1988, combined with a perceived tightening of the money supply by the Federal Reserve, helped push the dollar higher.
